

Deiusik At-Home Lash Lift Guide

Read the whole guide and the instructions in your kit before you start.

What's in the kit

- Lotion #1 (Lift / Perm)
- Lotion #2 (Set / Fixing)
- Lotion #3 (Nourish)
- Lotion #4 (Clean / Cleanser)
- Lash glue (5 ml)
- 5 pairs of silicone pads: S, M, M1, M2, L
- 3 Y-brushes

Choosing your pad size

- Shorter lashes: start with S or M.
- Medium lashes: try M1 or M2.
- Longer lashes: use L.
- The pad should be about as tall as your lashes, or slightly taller. If lash tips hang over the top edge, go one size up.

Applying the glue without mess

- Start with clean, dry, oil-free lashes and lids. No mascara or eye cream.
- Use a very thin layer of glue. A little goes a long way.
- Glue the pad close to the lash line, then wait a few seconds until the glue turns tacky.
- Add a thin line of glue on the pad and use the Y-brush to lift lashes onto it, a few at a time.
- Wipe excess glue right away with the brush. Never let glue touch your eye.

The 4 steps

Timings below come from the supplier's instruction chart included with the product. Always follow the leaflet in your box if it differs.

- **1. LIFT:** apply Lotion #1 to about 3/4 of the lash length, keeping 1-2 mm away from the roots. Supplier time: 10-12 minutes. Wipe it off.
- **2. SET:** apply Lotion #2 the same way. Supplier time: 10-12 minutes. Wipe it off.
- **3. CLEAN:** use Lotion #4 to gently remove residue and help release lashes from the pad.
- **4. NOURISH:** apply Lotion #3. Supplier time: about 3 minutes. Then remove the pads and comb lashes.

Common mistakes

- Too much lotion or glue near the lash line.
- Lashes crossed or twisted on the pad: comb them flat first.
- Wrong pad size: too small gives a sharp curl, too large a weak one.
- Leaving lotions on longer than the instructions say.
- Getting lashes wet or applying makeup right after: follow your kit leaflet.

Patch test first

Do a patch test 24-48 hours before your first lift. Apply a small amount of each lotion behind your ear or on your inner arm, as described in the kit instructions. If you notice redness, itching or any discomfort, do not use the kit.

Safety tips

- Avoid contact with your eyes. If a product gets into your eye, rinse with plenty of clean water.
- Do not use on irritated, sensitive or damaged eyes or skin.
- Keep your eyes closed while lotions are on your lashes.
- Keep out of reach of children. Close bottles tightly after use.
- Stop using the kit if you feel any discomfort.
